Hidden Wall Safe

Instructions for Installation

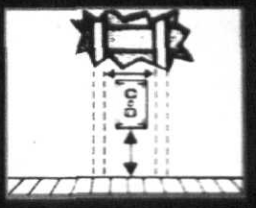

Fig. 1- Determine height of outlet in the room where wall safe is to be installed, making sure there are no studs, plumbing or heating ducts in area where wall safe will be installed. Wall safe cannot be installed in masonry wall.

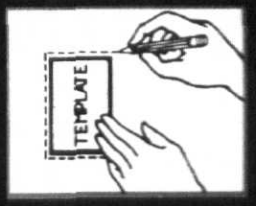

Fig. 2- Using the template provided, carefully draw pencil line on wall in exact area where wall safe will be.

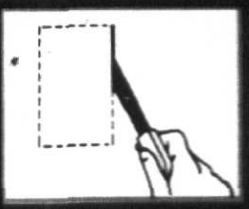

Fig. 3- Using the saw provided, carefully cut along the pencil line to create an opening in the sheet rock for your wall safe.

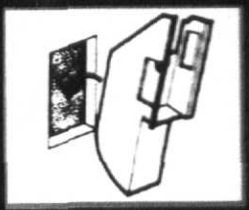

Fig. 4- Insert the wall safe compartment through the opening. The two side wings on the compartment will stop the compartment from falling completely through the wall.

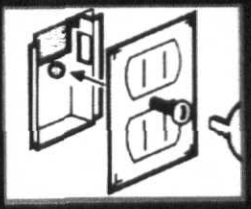

Fig. 5- With your wall safe compartment now in place, cover the opening with your face plate, which will conceal your wall safe compartment, allowing it to look like any normal electrical outlet.

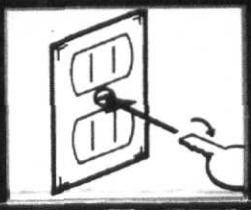

Fig. 6- Use key provided, turn center screw 1/2 turn to the right, which will move metal locking bar into position, securing your valuables in wall safe. To remove articles, use key, turn center screw 1/2 turn to the left, allowing face plate to be removed.
